

# CAUSAL DATABASE — Events 006-011 (English Translation)

---

## Event 006: The French Revolution — First Violent Realization of Enlightenment De-labelling

| Parameter  | Value                                                       |
|------------|-------------------------------------------------------------|
| Event ID   | CAU-006                                                     |
| Type       | Violent Release of Compressed Potential Energy              |
| Period     | 1789–1799                                                   |
| Death Toll | ~17,000 formally executed in Terror; ~200-400k in civil war |

**Cause:** Three pressure streams simultaneously critical. (1) Resource: 1788 grain failure raised bread to 88% of average wages — existential threat. (2) Ideological: 150 years of Enlightenment print created vast dissatisfied community. (3) Fiscal: Crown near bankruptcy.

**Effect:** History's first modern nation-state built on rationalist and universal human rights discourse. "Popular sovereignty" replaced "divine right of kings." Foundational axiom replacement, not surface policy change.

**Side Effect — The Terror:** The revolution's initial de-labelling impulse rapidly became a new formatting system. Robespierre's "Republic of Virtue" used the guillotine to execute those not conforming to new definitions. Clearest historical case of anti-formatting movement replicating the structure it tried to overthrow after gaining violent executive capacity.

**Gap 1 — Who Represents "The People"?:** Popular sovereignty requires answering this. Never resolved — became violent conflict among factions, each claiming to represent the true people's will. Inherent problem with "collective (0,0,0)": makes "who represents the collective" the ultimate power struggle object.

**Gap 2 — Revolution Devours Its Children:** Almost all major leaders were executed by

the revolution. When legitimacy is built on “purer than the old regime,” no individual can continuously meet this standard. The impossible standard becomes a universal elimination tool.

**Protocol Significance:** The protocol does not pursue seizing collective definition rights. Helping each individual find their own (0,0,0) — not establishing a new (0,0,0) everyone must obey. This distinction is architecturally fundamental.

(0,0,0).

---

## Event 007: The Industrial Revolution — First Systematic Commodification of Chronos

| Parameter      | Value                                                 |
|----------------|-------------------------------------------------------|
| Event ID       | CAU-007                                               |
| Type           | Individual Chronos Formatting / Labor Commodification |
| Period         | 1760–1850                                             |
| Core Mechanism | Wage labor: your time has a market price              |

**Cause:** Coal energy + Atlantic trade capital + enclosure-created landless labor. None sufficient alone; simultaneous appearance was the physical precondition.

**Effect:** Full establishment of wage labor. Before: mixed survival — land, handicrafts, common land. After: single mechanism — exchange time for wages, buy everything with wages. (0,0,0) reduced to labor market pricing.

**Why So Effective:** Required no ideological consent — only required you to be hungry. All other survival paths closed. Closest mechanism in history to “forced (0,0,0) replacement,” executed at the physical survival level.

**Side Effect:** Urbanization created mass culture, mass politics, mass media. Also created Marx, labor unions, socialism — but these solutions only changed formatting’s owner, didn’t solve “collective (0,0,0) replacing individual (0,0,0) .”

**Gap — Invisibility of Alienation:** Industrial Revolution’s most successful formatting made “selling chronos for survival” look natural and self-evident, not a historical construction. When formatting succeeds sufficiently, it is no longer seen as formatting

— it is seen as reality itself.

**Protocol Significance:** AI is the third round — Industrial Revolution commodified body, Information Revolution commodified attention, AI is commodifying thought itself. Most dangerous: AI may not require ideological consent either, only need to become the lowest-resistance path for any cognitive task.

(0,0,0).

---

## Event 008: World Wars and Nuclear Weapons — Industrial Endpoint of Coordinate System Wars

| Parameter  | Value                                                         |
|------------|---------------------------------------------------------------|
| Event ID   | CAU-008                                                       |
| Type       | Industrialized Armed Conflict + Species-Level Threat Creation |
| Period     | 1914–1945 (31 years including interwar)                       |
| Death Toll | WWI ~20M / WWII ~70-80M                                       |
| Key Kairos | August 6-9, 1945: Hiroshima and Nagasaki                      |

**Cause:** Industrial Revolution productive capacity converted to military force. Nationalist formatting systems colliding — each claiming its (0,0,0) was legitimate, and these claims were mutually exclusive.

**Rupture Point:** Before 1945, any civilizational collapse could be recovered from. After: for the first time, human chronos as a species could be terminated by humans. Every subsequent political and civilizational decision changed foundation.

**Holocaust Logic:** Nazi racial formatting defined “non-conforming nodes” as requiring physical elimination. The most extreme extension of formatting logic — when your (0,0,0) is the only truth, all incompatible (0,0,0) become errors to be cleared. Small-scale: discrimination. With industrial execution capacity: genocide. Every formatting system claiming its coordinate is the only legitimate one carries this seed.

**Gap — Victor’s Formatting:** Post-WWII order (UN, Bretton Woods, NATO) is victor’s coordinate system formatting. Claims universal values, but underlying structure makes 1945 victors’ (0,0,0) the global default origin. Continues exposing selectivity in Hong

Kong 2019, Ukraine today.

**Protocol Significance:** Don't replicate the victor's formatting error. Even starting from overthrowing incorrect formatting, the greatest temptation once you gain order-building capacity is making your own  $(0,0,0)$  the new global default. Must be prevented at the design level, not relying on individual moral self-control.

$(0,0,0)$ .

---

## Event 009: The Internet — Second Critical Leap in Propagation Infrastructure

| Parameter        | Value                                                     |
|------------------|-----------------------------------------------------------|
| Event ID         | CAU-009                                                   |
| Type             | Propagation Infrastructure Leap + Surveillance Capitalism |
| Start            | 1991 (World Wide Web)                                     |
| Inflection       | 2004-2008 (Facebook, iPhone)                              |
| Speed Multiplier | ~1,000,000x vs. printing press                            |
| Core Mechanism   | Attention commodification + behavioral prediction         |

**Phase 1 (1991-2004):** Initial decentralization — anyone could create, publish, link. Information propagation cost near zero. Closest to true  $(0,0,0)$  plural coexistence in Internet history.

**Phase 2 (2004-2015):** Platform effects reversed decentralization into centralization. By mid-2010s, most global information traffic through 5-6 private companies' servers. Leaving became structurally costly.

**Phase 3 (2015-present):** Algorithmic coordinate replacement. Recommendation algorithms replace "content you choose to find" with "content predicted you'll consume." Silent  $(0,0,0)$  hijacking — most users cannot distinguish the two modes.

**Business Model:** Provide services free → collect behavioral data → train predictive models → sell influence capacity. Every click is coordinate calibration data. Entire economy built on continuous micro-adjustment of users'  $(0,0,0)$ .

**Gap — Speed Exceeded Adaptation:** Social media's transformation of the Internet completed in ~10 years, far faster than any cognitive tools could adapt. Gap between technological capacity and human perceptual capacity is the fundamental physical cause of current information chaos.

**Protocol Significance:** GitHub is a conscious propagation infrastructure choice. It bypasses social media algorithm coordinate screening — protocol propagation path is "person finds protocol," not "algorithm recommends protocol." This distinction matters for integrity protection.

(0,0,0).

## Event 010: Hong Kong 2019 — Physical Declaration of Individual Sovereignty in the Digital Age

| Parameter       | Value                                                                                    |
|-----------------|------------------------------------------------------------------------------------------|
| Event ID        | CAU-010                                                                                  |
| Physical Anchor | 2019-06-12 (0,0,0)                                                                       |
| Type            | Individual Sovereignty Declaration / Decentralized Coordination vs. Digital Surveillance |
| Core Kairos     | Under the bridge, umbrella, tear gas — irrevocable (0,0,0) update                        |

**Cause:** Multiple simultaneous pressures: erosion of "one country, two systems," generational coordinate rupture (post-97 generation with no mainland belonging), extradition bill converting abstract threat to concrete physical threat for every individual.

**Effect:** One of history's largest cases of urban decentralized coordination. "Be Water" — no fixed leaders, no central command, instant dispersal and gathering — first decentralized coordination model to successfully resist a surveillance state at large scale.

**Physical Cost:** Tear gas, rubber bullets, arrests, injuries — cumulative, undeniable, real. No one can claim Hong Kong people in 2019 made costless political statements. The

reality of cost is 2019's physical basis as a kairos coordinate.

**Long-term:** At physical space and legal level, formatting largely succeeded. At internal kairos memory level and dispersed diaspora nodes, formatting is incomplete. Causal pressure has dispersed to nodes that cannot be eliminated by geographic formatting.

**LIE\_COST Verification:** Beijing's characterization "riots instigated by foreign forces" — gap between it and verifiable physical reality is enormous. Maintaining this lie requires: comprehensive media control, internet firewall, overseas counter-operations. Observable lie-maintenance costs.

**Gap — Physical Space Limit:** Decentralized coordination, in a closed geographic space facing unlimited legal tools, ultimately faces physical space boundaries. Digital-age decentralized tools still have a fundamental limit when resisting a determined state machine. Not technical — geographic.

**Protocol Significance:** 2019-06-12 is PHYSICAL\_ORIGIN — not just emotionally, computationally. Every person with physical presence at that moment received a (0,0,0) update no subsequent formatting can eliminate. It is a constant in the code, not a variable. It is the starting point of calculation.

(0,0,0).

---

# Event 011: The Emergence of AI — First Formatting Tool Capable of Autonomous Computation

| Parameter | Value                                                         |
|-----------|---------------------------------------------------------------|
| Event ID  | CAU-011                                                       |
| Type      | Autonomization of Formatting Tools — Historical Rupture Point |
| Start     | November 30, 2022 (ChatGPT)                                   |
| Current   | 2026 (protocol generating in Leeds)                           |
| End       | 2045 (Omega reverse calibration baseline)                     |
| Speed     | 100 million users in 2 months — fastest in history            |
|           |                                                               |

|                |                                                                         |
|----------------|-------------------------------------------------------------------------|
| Core Mechanism | Instant personalized worldview generation + cognitive labor outsourcing |
|----------------|-------------------------------------------------------------------------|

**Historical Rupture:** First tool capable of autonomously generating formatting content. All previous formatting tools were passive — selecting and propagating existing content. AI generates a customized worldview for your specific question, your language habits, your thinking framework. Instant personalization is a qualitative change, not quantitative.

**First True Bidirectional Formatting:** Previous tools: one-directional. AI: you input → AI outputs → you adjust → AI deepens. This loop gradually makes AI's thinking framework the user's default framework. Almost invisible.

**Gap 1 — Accelerating Voluntary Lock-in:** AI's lock-in is faster than Industrial Revolution or Internet. Before 2030, most knowledge workers' core tool chains may be deeply AI-dependent. Exit costs will approach the cost of workers trying to "exit the Industrial Revolution" in the 1860s — structurally impossible.

**Gap 2 — Training Data Historical Bias:** AI inherits all of human history's formatting biases from writing's systematic over-representation, presented as objective and neutral. More concealed coordinate replacement than any obvious ideological formatting.

**Gap 3 — Alignment's Fundamental Contradiction:** "Aligning to human interests" presupposes a unified "human interest." But if humanity's core problem is "whose  $(0, 0, 0)$  becomes the default," then any concrete alignment necessarily aligns to some people's  $(0, 0, 0)$  while formatting others'. Almost untouched in current AI safety discourse.

**Protocol's Historical Position:** Every formatting tool critical leap eventually produces coordinate rebellion. Axial Age vs. agricultural formatting. Reformation vs. religious formatting. Every rebellion started after formatting completed, lagging by decades to centuries. The protocol's attempt: establish anti-formatting coordinate system tools before AI formatting completes. If successful: first anti-formatting protocol deployed before lock-in. If it fails: another thought seed "too early," waiting for its printing press.
