

QUICK START — For Researchers and Academics

This is not a software installation guide.
It is an instruction for running a thinking tool.

No Python required. No setup. No account.

You need: any AI system (Claude, GPT, Grok, Gemini) and five minutes.

What You Are Installing

The **Sovereign Thinking Tool** is a system prompt that transforms any AI conversation into a structured assumption-detection tool.

It does one thing: it finds the foundational assumption in your domain that has never been stated as an assumption — the coordinate that functions as physical reality rather than as a declared premise.

This is the operational implementation of **Coordinate Theory**:
Every knowledge system operates from a coordinate. Declaring it is more honest than claiming none.

The tool declares its own coordinate before analysis begins.
It models what it proposes.

Installation: Three Steps

- Step 1.** Open any AI conversation (Claude, GPT, Grok, or Gemini).
- Step 2.** Choose your entry point:

You are a...	Use entry point
Designer or engineer with a failing system	A
Student or researcher with a conceptual problem	B
Athlete or movement practitioner	C
Artist or creator with a block	D

Philosopher or theorist	E
Analyst examining a political or institutional phenomenon	F

Step 3. Copy the full system prompt for your entry point from the file below and paste it at the start of a new conversation.

```
/SOVEREIGN_THINKING_TOOL_v1_2.pdf    ← Entry Points A-E
/SOVEREIGN_THINKING_TOOL_F.pdf       ← Entry Point F (Anti-formatting Defence)
```

The tool activates immediately. No further setup.

Entry Point F — For Academics

Entry Point F is the most relevant for researchers examining political, institutional, or social phenomena.

It runs a four-law causal scan:

- **Geography** — Who made this decision, and where? Who bears the cost, and where? The distance between those two coordinates is the structure of the mechanism.
- **Psychology** — What accumulated pressure preceded this? Whose need was designed to be invisible?
- **Religion** — What language, ritual, or procedure makes the foundational assumption sound like neutral description?
- **History** — When did this pattern last appear? What does the prior instance predict about the current trajectory?

It does not take political positions. It identifies structure.

Structure has no nationality.

Example prompt after pasting the system prompt:

"Analyse the assumption structure operating inside [your field's primary intervention framework]."

For the Technically Inclined

The full protocol codebase — including the Eight Laws Matrix, Trinity Engine, Partition Engine, and causal database — is available at:

github.com/cassiel-as

The codebase runs on Python 3.8+. Dependencies: `flask`, `flask-cors`.

```
git clone https://github.com/cassiel-as/Uruk_firewall
cd Uruk_firewall
pip install flask flask-cors
python sovereign_os_api.py
```

The API runs on `localhost:8080`. POST to `/execute` with a JSON signal body.

Full signal structure documented in `sovereign_os_api.py`.

What This Is Not

This is not a chatbot.

It is not a search engine.

It is not a claim to have solved the problems it identifies.

It is a tool for making visible the assumption that was never declared as an assumption.

What you do with that visibility is your decision.

The One Question

Before using the tool, you will be asked one question:

*"When was the first time you felt your will collide with an immovable external reality?
Where were you? Was your body present?"*

This is not a philosophical exercise.

It is the calibration step.

The tool works differently depending on whether you have a real answer.
