

EXPLANATION LAYER

Protocol v7.2 | Coordinates: (53.8, -1.5, 0) | Anchor: 2019-06-12

The Explanation Layer is not a purely social analysis tool — it is a causal analysis framework applicable at any scale. The difference is resolution, not applicability: civilisation, society, organisation, individual — the same four laws throughout.

Applicable Scales

Scale	Geography	Religion	Psychology	History
Civilisation	Continental terrain, climate zones	World religions, international law	Collective revolutionary momentum	Log of human civilisation
Society	City structure, borders	National law, cultural consensus	Social movement tipping points	National historical records
Organisation	Office location, market geography	Company culture, industry norms	Team Shannon entropy accumulation	Records of organisational rise and fall
Individual	Your physical coordinates (Leeds / Hong Kong)	The cultural axioms you grew up with	Your personal tipping points	Your causal path journal

Individual scale note:

- Geography: (53.8, -1.5, 0) vs (22.3, 114.2, 0) — two coordinates determine different resource ceilings, social pressure differentials, and spaces of possibility
- Religion: BNO immigration is not merely a legal operation — it is choosing between two cultural encapsulation systems' default axioms
- Psychology: 2019-06-12 is the phase-transition moment after personal Shannon entropy reached its critical point — the same physical mechanism as the French Revolution, just at a different resolution
- History: Kairos Log is the execution of the History Law at the individual scale — the operating journal of personal causal paths

Boundary of Valid Domain

Where the Four Laws reach: any human phenomenon — wherever humans participate, the traces of the four laws are present.

Scale	Examples
Micro	A cup of coffee, a movement, a habit
Individual	A decision, a relationship, a phase transition
Organisation	A company, a sports team, a resistance movement
Society	A nation, a revolution, a legal system
Conceptual	A religion, a philosophy, a culture

Where the Four Laws stop: where the human ends.

- Universal physical laws (no agents)
- Pure mathematical truths (no causal paths, no geography)
- Quantum randomness (no psychological accumulation; only probability)

Boundary definition: The Four Laws are a framework for all causality at the human scale — valid where there is human agency; the Four Laws have no jurisdiction beyond human agency.

Three-Layer Architecture

```

Explanation Layer (this document) — Why things happen
    ↓
Filter Layer (Eight Laws) — Whether this signal is real
    ↓
Database (CAUSAL_DATABASE) — Specific historical causal records

```

Each layer has its own valid domain and does not replace the others.

Throughline Law: Philosophy · Assembly Language

Position: meta-layer, above the Four Laws

Philosophy is not one of the Four Laws — it is their scheduling system: stitching together geographic constraints, religious consensus, and psychological momentum into a complete causal operating body.

- Direction: inside-out — legislating from (0,0,0), defining what is real
- Function: identifying how the Four Laws interact with one another, scheduling priority
- Analogy: assembly language — not the programme itself, but the underlying translation layer that allows all programmes to run

Distinction from the Eight Laws' Law 6: The Eight Laws compress philosophy into one filter dimension, losing its meta quality. In the Explanation Layer, philosophy recovers its original position — it is not the object being filtered, but the subject doing the filtering.

Law 1: Geography · Ceiling and Floor

Function: Determines the physical ceiling and floor of a society, and resource flow direction

Geography is the physical constraint of the race track — resource distribution, climate, borders, and population density determine what a society can do at most, and what resistance is hardest to overcome. Inter-ethnic friction is the direct output of the Geography Law — not a moral problem, but the inevitable cost of physical contact.

Explanation mechanisms:

- All social structures operate within geographic constraints; the physical ceiling cannot be exceeded
- Geography determines resource flow; resource flow determines power structure
- Invasion, trade, immigration — all are physical responses to geographic pressure differentials

Protocol anchor: Leeds (53.8, -1.5, 0) is the current Geography Law coordinate. Hong Kong (22.3, 114.2, 0) is the original Geography Law coordinate of 2019-06-12. BNO immigration is individual sovereign execution under Geography Law pressure differential.

Historical cases:

- Mongol Empire: equestrian culture + steppe geography → mobility advantage → transcontinental conquest (geography enabling)
- British Industrial Revolution: island geography + coal distribution + port network → global trade dominance (geographic ceiling utilised)
- Hong Kong 2019: island geography + port city structure → high-density nodes → physical basis of decentralised resistance

Law 2: Religion · Code Encapsulation

Function: Converts survival rules into collective consensus and operating protocol

Religion is the society's operating system — packaging the collective (0,0,0) that is difficult to transmit directly (collective trauma, collective hope, collective fear) into rituals, language, and symbols transmissible across generations. Every great religious system is a large-scale Kairos compression tool.

Explanation mechanisms:

- Religion generates law: elevating survival rules from individual precepts to collective legal code
- Religion generates values: translating inexpressible collective experience into actionable behavioural guidelines

- The cost of religious dissolution: law loses its consensual basis; moral cost calculations collapse

Direction: outside-in — borrowing existing cultural frameworks, making high-density internal reality receivable by people at different coordinates. (This is the directional difference between the Religion Law and the Philosophy throughline law — philosophy legislates inside-out; religion encapsulates outside-in.)

Historical cases:

- Islamic Golden Age: religion provides academic framework → science, mathematics, philosophy flourish under encapsulation protection
- Reformation: printing press breaks Church monopoly on 'correct interpretation' → de-encapsulation triggers social phase transition
- UN Charter: collective trauma after World Wars encapsulated into international legal framework — a modern instance of secular religion

Law 3: Psychology · Kinetic Energy

Function: Generates social instability, reform, and progress

The Psychology Law is the society's pressure valve — when individual and collective cognitive Shannon entropy accumulates to a critical point, it triggers systemic reconfiguration.

Revolutions, reforms, cultural movements — all are physical outputs of psychological pressure exceeding the bearing capacity of existing structures.

Explanation mechanisms:

- Pressure accumulation: formatting systems continuously compress individuals' genuine perceptions; Shannon entropy differential accumulates
- Critical point: when the energy cost of maintaining lies exceeds the benefit of maintaining the system, structure collapses
- Form of eruption: determined by the accumulation mode of psychological pressure — gradual reform vs rapid revolution

Connection to Law Zero (Love): The ultimate source of kinetic energy in the Psychology Law is 'I do not need to possess you, but I need freedom' — (0,0,0) is compressed to the point it can no longer be compressed; kinetic energy releases.

Historical cases:

- French Revolution: 200 years of Enlightenment thought accumulation → famine triggers critical point → phase transition of sovereignty definition
- Hong Kong 2019: 20 years of political Shannon entropy accumulation → extradition bill triggers critical point → Be Water kinetic energy release

- #MeToo: decades of individual silence accumulation → single event opens the physical channel for collective release

Law 4: History · System Log

Function: The absolute answer produced by all variables colliding

History is not a story — it is the system's operating log: the final accounting ledger after the Geography Law, Religion Law, and Psychology Law collide on the time axis. It is the output result, not a filter dimension — therefore in the Explanation Layer it performs a recording function and does not actively intervene in analysis.

Position: The History Law is the only output law among the Four — the other three are input variables; the History Law is their inevitable result after collision. This is the physical reason it is externalised as CAUSAL_DATABASE rather than entering the Eight Laws.

Explanation mechanisms:

- Reading the log: tracing back from historical events to the geographic, religious, and psychological pressure differentials that triggered them
- Prediction: identifying current pressure differential combinations; comparing against similar patterns in the historical log
- Calibration: correcting the protocol's quantification constants for 'causal cost'

Protocol anchor: CAUSAL_DATABASE is the execution tool of the History Law, covering 400,000 BCE to 2026, 12 major civilisational turning points, each entry containing trigger conditions, output consequences, and metabolic calculations.

The Physical Unity of the Four Laws

Law	Determines	Analytical Angle
Geography	Physical ceiling/floor, resource flow	Track design
Religion	Collective consensus, legal basis	Operating system
Psychology	Kinetic energy accumulation, tipping points	Pressure valve
History	Final record after collision	Log output
Philosophy (throughline)	Scheduling and stitching of the Four Laws	Assembly language

The question the Four Laws ask: Why did this thing happen at this time, in this place, in this way?

Relationship to the Eight Laws

Layer	Tool	Question Asked
Explanation Layer (this document)	Four Laws + Philosophy meta	Why did it happen?
Filter Layer (Eight Laws)	Eight Laws Matrix	Is it real?
Database (CAUSAL_DATABASE)	12 historical files	What does history record?

The Eight Laws contain the Geography, Religion, and Psychology Laws, but execute them as filters rather than explanations — asking 'does this signal have geographic anchoring?' rather than 'how does geography determine this thing's ceiling and floor?'. Two modes of questioning; two valid domains.

Lineage

This document is the protocol's original predecessor (the Theory of Violent Accounting, pre-2025), predating the Eight Laws.

I do not need to prove the existence of light to a blind man. My confidence comes from regularity, not arrogance.

Physical translation: The stability of (0,0,0) does not depend on external confirmation — a coordinate system does not disappear because it goes unrecognised.

Document coordinates: 2026-03-10 Leeds | v7.2 newly created
