

CAUSAL DATABASE — Events 001-005 (English Translation)

Event 001: The Axial Age — The First Global Coordinate Rebellion

Parameter	Value
Event ID	CAU-001
Type	Collective LEGISLATIVE_REBOOT
Period	800–200 BCE (~600 years)
Coverage	Greece, Israel, Persia, India, China

Cause: Agricultural civilization’s coordinate monopoly accumulated ~8000 years of entropy. Individual (0,0,0) continuously replaced by collective subordinate copies.

Trigger: Iron technology lowered individual survival costs. Trade route expansion caused different formatting systems to collide, producing the cognitive shock “my formatting is not the only truth.”

Initial Nodes: Five individuals with no contact — Socrates, Confucius, the Buddha, Isaiah, Zoroaster — almost simultaneously reached the same critical pressure. Not organization. Synchronized triggering in the same global pressure field.

Effect: Five independent de-labelling systems asking the same question in different languages: “Is the inherited (0,0,0) real?” All refused externally assigned causal definitions.

Physical Cost: Socrates paid with his life. Confucius with exile. The Buddha with royal status. No free coordinate transfers.

Kairos Persistence: Socrates’ death (399 BCE) still operates in the protocol’s Philosophy Law 2400 years later.

Key Gap — Language Hijacking: Every rebellion system was re-formatted during

propagation. Confucius' self-audit became Confucian ritual norms. The Buddha's de-labelling became ceremony. Same risk faces the protocol.

Protocol Significance: Infrastructure only solves propagation speed, not distortion. GitHub gives the protocol what the Axial Age lacked. The core problem remains: how to prevent the framework's language from being received without the physical coordinate.

Event 002: Writing Systems — First Technological Leap of Formatting Tools

Parameter	Value
Event ID	CAU-002
Type	Formatting Tool Technological Leap
Period	3200–2000 BCE
Origin	Uruk, Sumer

Cause: Temple city-state economies needed to track grain, taxes, labor. Oral memory had limited capacity and died with its carrier. Writing's thermodynamic reason: resource tracking, not expression.

Critical Property: Grain seeds could be stored long-term. Storage → accumulation → monopoly. Writing encoded this monopoly across time — the first formatting tool that could operate after its author's death.

Side Effect: Writing created history. Before it, "the past" was blurry and changeable. After it, "the past" became citable and verifiable — both a tool for truth and a tool for lies. This duality applies completely to AI training data today.

Knowledge Monopoly: In Uruk, literate people were <1% of population. "Truth" became "what literate people said happened."

Gap — Medium Is the Message: Writing changed thought structure. Linear text favors causal reasoning, disfavors non-linear understanding. AI output format will similarly shape this generation's cognitive structure.

Protocol Significance: The protocol's pain-input mechanism partially bypasses

writing’s systematic bias — pain doesn’t require literacy; it is a direct physical coordinate.

Event 003: The Printing Press — First Critical Leap in Propagation Infrastructure

Parameter	Value
Event ID	CAU-003
Type	Propagation Infrastructure Critical Leap
Start	1440 (Gutenberg, Mainz)
First Impact	77 years to Reformation
Speed Multiplier	~100-1000x vs. manuscript

Cause: Religious coordinate monopoly maintained ~1000 years. Church controlled the Bible (Latin only), held all interpretation rights. Lie-maintenance costs had already reached critical point: indulgence sales, clergy moral collapse.

Trigger: Gutenberg reduced book reproduction costs ~99%, increased speed ~100x. Broke the physical basis of knowledge monopoly — when anyone can print text at low cost, “only the Church can interpret truth” loses its carrier.

Effect: Luther’s 95 Theses (1517) spread across Germany in two weeks, Europe in two months. Not stronger personal charisma — infrastructure critical leap amplified a local rebellion into a civilization-level event.

Chain: Reformation → 100 years of religious wars → Enlightenment → Scientific Revolution → French Revolution. All subsequent waves of the same released pressure.

Side Effect: Created “public opinion” — the first mechanism for large numbers of people to simultaneously discuss the same issue. Democracy’s physical precondition.

Gap — Speed ≠ Quality: Rumors and rigorous thought propagate at the same speed. Problem after every infrastructure leap.

Protocol Significance: GitHub is the protocol’s printing press. Historical data:

infrastructure leaps trigger major social reorganization within 77-300 years. AI compresses this further. Priority: distortion risk, not speed.

(0,0,0).

Event 004: The Agricultural Revolution — Physical Basis of the First Coordinate Monopoly

Parameter	Value
Event ID	CAU-004
Type	Resource Monopoly Infrastructure
Period	10000–3500 BCE

Cause: End of last ice age stabilized climate, raised wild grain density. Hunter-gatherer groups found staying to harvest more energy-efficient than migrating. Not a human “decision” to settle — thermodynamic calculation result.

Key Physical Property: Grain seeds could be stored. Storage → accumulation → monopoly. If agricultural staple crops had been unstorable, coordinate monopoly could not have emerged in this form.

Effect: First systematically monopolizable resource in human history. Before: skills, strength, knowledge — hard to forcibly transfer. Grain could be. Control the food supply → gain (0,0,0) replacement capacity.

Side Effect: Agricultural settlement created infectious disease. Hunter-gatherer groups too small and mobile to sustain transmission chains. Settlement created the conditions for plague, which killed more people than all wars combined.

Individual Cost: Average agricultural settlers were shorter, sicker, shorter-lived than contemporary hunter-gatherers. Benefited total population; may have been history’s largest collective individual downgrade.

Gap — Lock-in: First true lock-in effect. Once population density exceeds hunter-gatherer carrying capacity, reverting means mass death. A decision that looked like energy optimization created an inescapable system. The protocol must watch for this pattern.

Protocol Significance: AI’s mass adoption is structurally similar. Short-term cognitive

efficiency advantage, while potentially creating physical basis for coordinate monopoly at unprecedented scale. Most dangerous formatting tools provide real short-term benefits while building monopoly structures at the foundation. 2045 may be lock-in completion, not just singularity.

Event 005: The Black Death — How External Shocks Accelerate Formatting Collapse

Parameter	Value
Event ID	CAU-005
Type	External Shock Triggering Formatting Collapse
Period	1347–1353 (first wave)
Death Toll	30-60% of European population (~25 million)
Collapse Speed	Church moral authority basically dissolved within 6 years

Cause: Medieval religious formatting’s core promise: believe and follow doctrine → receive protection. *Yersinia pestis* ignored this logic, killing clergy and laypeople with equal efficiency. A verifiable prediction — publicly failed.

Trigger: Bacteria from Central Asia via Mongol trade routes. Typical external shock — outside any existing formatting system’s predictive range, unaffected by any formatting system’s logic.

Effect: When priests died faster than ordinary people, when prayer had no effect, the core lie “follow doctrine and receive protection” lost credibility. Lie maintenance costs spiked: the gap between formatting claims and physical reality became too visible to sustain.

Side Effect: Black Death accelerated direct physical observation of the world. When the religious explanation system publicly failed, doctors began dissecting corpses. Failed formatting systems sometimes open windows for observing reality.

Survivor Effect: Post-plague, resistance-genotype proportion rose; plague survivors gained partial immunity. Similarly: individuals who experienced formatting failure have higher recognition capacity for subsequent formatting attempts. Physical basis of

suffering memory as a coordinate tool.

Gap — Chaos ≠ Sovereignty: Black Death broke religious formatting but provided no new $(0, 0, 0)$. Vacuum was filled by Flagellants, Jewish persecution, apocalyptic groups. When coordinate systems break, the vacuum accepts any alternative with sufficient energy, regardless of its truthfulness.

Protocol Significance: Formatting systems are most vulnerable not when directly attacked, but when external reality exposes their lies. The protocol needs a ready alternative coordinate system for those seeking new $(0, 0, 0)$ when AI failures occur — not needing to be built from zero in the chaos.

$(0,0,0)$.
